ART 151
Project Proposal

The title of my project is: "Cars Are Amazing". I chose this particular title because I genuinely believe that cars are a work of beauty in every way. Everything that goes into making a car function as a whole is an incredible feat of engineering that continues to be improved as time goes on.

My project is a website that showcases my love for cars by listing a few of them along with some information on the car. The website has a navigation menu at the top which contains four tabs: Home, Cars I Want, Dream Cars, and About Me. The 'Home' tab will be an introduction to the website and may have a slideshow of the cars shown in the other tabs. In addition, it may have some buttons for the user to download a random car wallpaper or something similar. The 'Cars I Want" tab is a list of some of the cars that are reasonably priced and that I may buy one day. On the other hand, the 'Dream Cars' tab is a list of cars with ridiculous prices which I will probably never be able to afford or would want to spend that much money on a car. Finally, the 'About Me' tab is a picture of my first car and the only car to my name at the moment.

My project is made using a combination of HTML, CSS, and JavaScript. I am using Visual Studio Code to develop my project in.

The reason I am making this project is because I recently have developed a passion for cars. I can attribute this sudden interest to getting my first car around a year ago and learning that there is so much to them. I want to continue to learn as much as I can about them and to that effect, I may even want to study to be a car mechanic in the future.

I will most likely display my project using Discord and share my screen as I navigate through my website and explain what it contains.

Lastly, my project is for anyone who has an interest in cars and is curious enough to see what cars I like and see if there is a common taste.
